THE TOBACCO SITUATION

CONSUMPTION PER CAPITA OF ALL TOBACCO PRODUCTS, AND INDUSTRIAL PRODUCTION PER CAPITA, UNITED STATES, 1900-1939

* FEDERAL RESERVE BOARD INDEX NUMBERS ADJUSTED FOR CHANGES IN POPULATION

▲ PRELIMINARY

U. S. DEPARTMENT OF AGRICULTURE

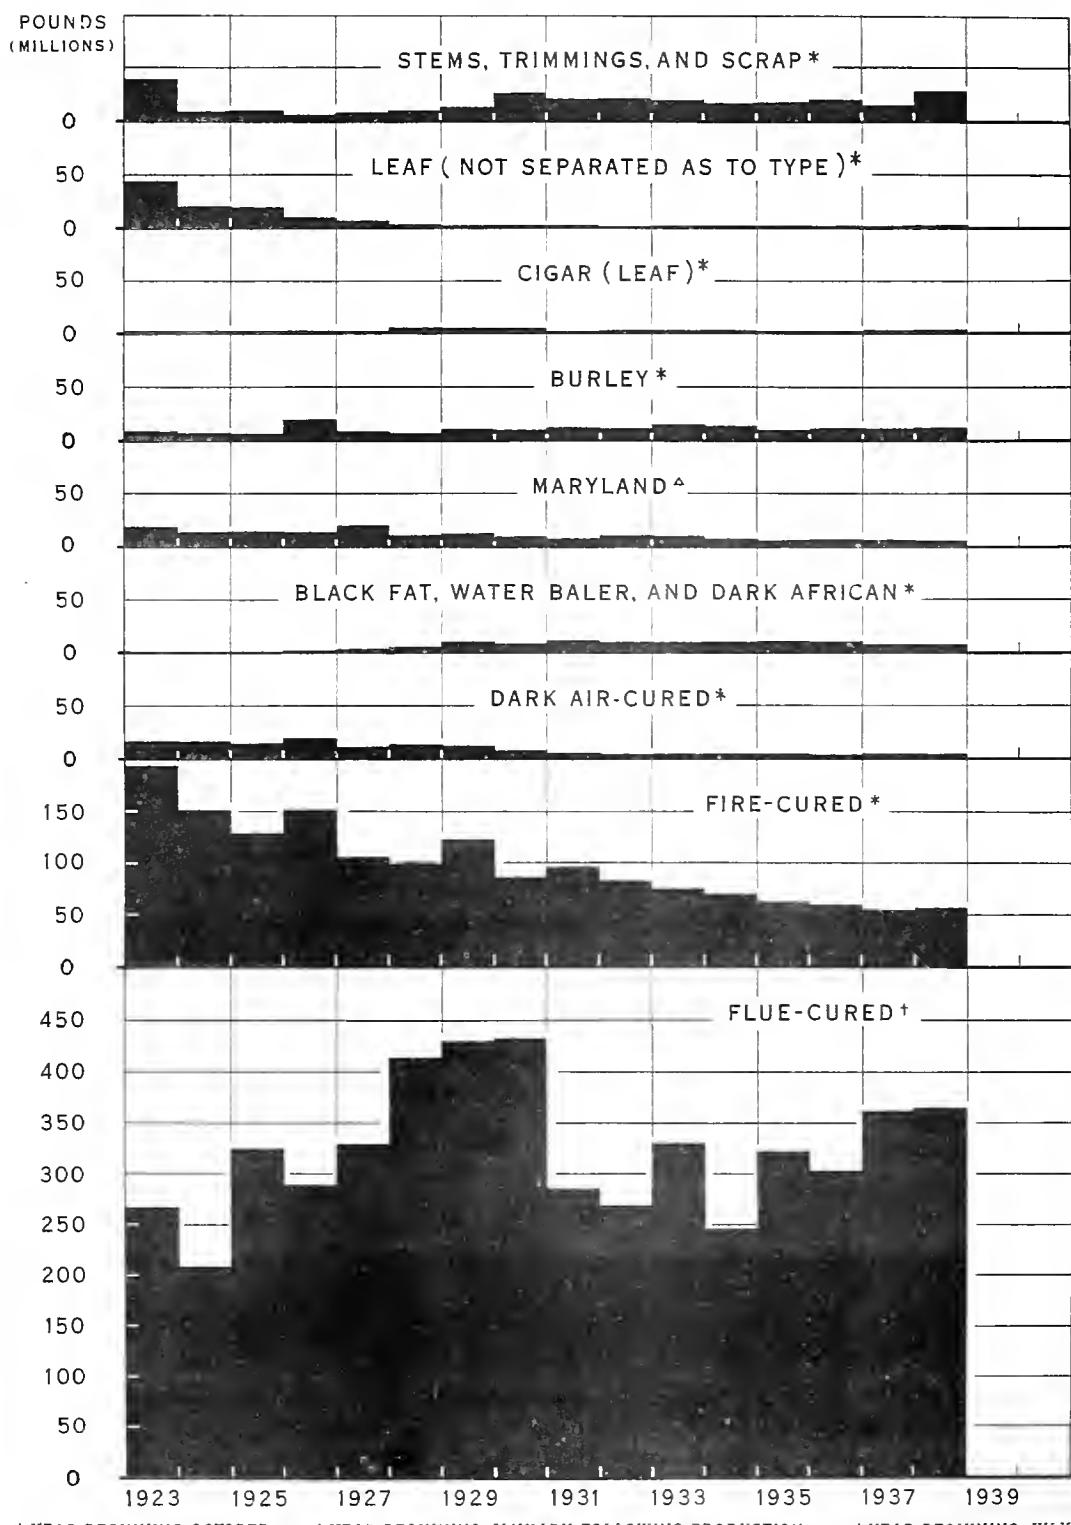

NEG. 24111 BUREAU OF AGRICULTURAL ECONOMICS

FROM 1900 THROUGH THE WORLD WAR THE TREND IN PER CAPITA CONSUMPTION OF TOBACCO PRODUCTS WAS UPWARD, BUT SINCE THEN CHANGES IN CONSUMPTION HAVE REPRESENTED SHIFTS AMONG PRODUCTS RATHER THAN AN INCREASE IN THE TOTAL QUANTITY PER CAPITA. THROUGHOUT THE ENTIRE PERIOD THE TREND OF TOTAL CONSUMPTION HAS BEEN UPWARD.

THE YEAR TO YEAR VARIATIONS IN PER CAPITA CONSUMPTION ARE RATHER CLOSELY CORRELATED WITH CHANGES IN BUSINESS ACTIVITY. DURING PERIODS OF REDUCED INDUSTRIAL PRODUCTION AND EMPLOYMENT THERE HAS BEEN A SHIFT FROM THE MORE EXPENSIVE TO LESS EXPENSIVE PRODUCTS, AS WELL AS A DECREASE IN THE TOTAL QUANTITY CONSUMED PER PERSON. DURING SUCH PERIODS, THE SHIFT HAS BEEN AWAY FROM CIGARS AND TOWARD THE LIGHTER CIGARETTE SMOKES.

THERE HAS BEEN A PRONOUNCED UPWARD TREND IN CIGARETTE CONSUMPTION, BUT THIS UPWARD TREND HAS BEEN OFFSET TO A VERY LARGE EXTENT BY A DECIDED DECREASE IN CONSUMPTION OF CHewing TOBACCOs.

TOBACCO: EXPORTS FROM THE UNITED STATES BY TYPES, 1923-38

Summary

Large supplies, greatly reduced exports and materially lower prices for some types compared with prices in 1938, are the major factors in the 1939-40 tobacco situation. Preliminary estimates on the 1939 record crop, amounting to 1,770 million pounds, indicate an average price of about 15.3 cents, bringing to growers approximately 270 million dollars for the crop. The 1938 crop of 1,376 million pounds averaged 19.7 cents, and also brought growers approximately 270 million dollars. Thus, the effect on growers' returns of the increased quantity marketed in 1939 was just about offset by the lower prices resulting from the larger supplies and reduced export outlets.

Production of flue-cured tobacco in 1939 was the largest on record, 42 percent larger than in 1938. Flue-cured is more dependent on export markets than other types, and hence was most affected by the decrease in exports. The season average price for flue-cured up to January 1 was 15.4 cents, a marked decline from the 1938 season average price of 22.2 cents.

Not all of the Burley crop has been sold, but preliminary indications are that the season average price will be near 17.5 cents per pound, compared with the season average price of 19 cents in 1938. The Burley crop was only 6.6 percent larger than in 1938, not nearly so large an increase as for flue-cured. Since exports of Burley represent a much smaller proportion of total disappearance than for flue-cured, the decline in export outlets has had less effect upon prices.

Prices of the dark tobaccos and cigar types as a whole have been slightly higher so far this season than a year earlier. The supplies of fire-cured, dark air-cured, and cigar types are more nearly in line with disappearance than in other recent years.

Exports of United States tobacco have been greatly reduced as a result of war-time influences. British restrictions on the use of dollar exchange, and later an embargo (effective January 1, 1940) against imports of American tobacco, resulted in the complete stoppage of tobacco exports from this country to the United Kingdom. To avoid the disruption of markets threatened by these conditions, especially with respect to flue-cured tobacco, the Commodity Credit Corporation advanced funds for the purchase of tobacco normally taken by the British trade. This tobacco will be stored in United States warehouses subject to the option of British tobacco interests. The options extend to July 1, 1941. The principal type affected is flue-cured, for which the United Kingdom is the largest foreign market. Fire-cured is also affected, but in lesser degree.

Tax-paid withdrawals of tobacco products so far this season indicate increased domestic consumption of cigarettes, cigars, and smoking mixtures but a continued decrease in consumption of chewing tobaccos. In the 6 months ended December 31, 1939, cigarette withdrawals were 5.3 percent higher than in the same months of 1938, while cigar withdrawals were 2.0 percent higher. For the calendar year 1939, withdrawals totaled 172,473,000,000 cigarettes and 5,510,000,000 cigars. With some increase of industrial production and employment in prospect for the year 1940 as a whole, consumption of tobacco products may be somewhat higher than in 1939.

FLUE-CURED, TYPES 11-14

Prices much lower; crop value somewhat lower than in 1938-39 season

All flue-cured markets except those for types 11a and 11b have been closed for the season. Markets for type 14 closed August 25; type 13, November 8; type 12, December 20; and types 11a and 11b are expected to close February 9. Warehouse sales reports show that 1,064 million pounds of flue-cured tobacco, or more than 95 percent of the 1939 crop of 1,118 million pounds estimated December 1, had been sold by January 1 at an average price of 15.4 cents, bringing to growers to that date more than 163 million dollars. During the same period the year previous, 758 million pounds or approximately the same portion of the flue-cured crop had been sold at an average price of 22.5 cents, bringing to growers the sum of 170 million dollars. The season's average price for this year's flue-cured crop will be about the average received to January 1.

Considering the record crop and the fact that all markets were closed from September 13 to October 10 after the withdrawal of British buyers, this crop has moved at an exceptionally rapid rate. Blocked sales continued into November.

Growers vote for acreage control in 1940

During the time the markets were closed, plans were made for funds to be advanced by the Commodity Credit Corporation to finance purchases usually made for British account, such plans contingent upon the outcome of the referendum for marketing quotas on the 1940 flue-cured crop.

A marketing quota was proclaimed September 25 and the referendum was held October 5. Of the 300,000 growers eligible to vote, 250,671 cast their ballots, with 90 percent voting in favor of the quota of an approximate 660 million pounds. The votes in favor of the quota by States were as follows: Virginia, 23,531; North Carolina, 159,954; South Carolina, 21,341; Georgia, 17,354; Florida, 3,347; and Alabama, 79.

The conversion of this marketing quota to an acreage basis, in compliance with an amendment to the Agricultural Adjustment Act of 1938, resulted in a total of 749,660 acres to be utilized in the production of flue-cured tobacco in 1940. However, because of increases in allotments to small growers, required by the amendment, approximately 760,000 acres will be distributed. This acreage is only 62 percent of the acreage planted to flue-cured in 1939; 83 percent of the 1938 acreage; and 88 percent of the 5-year average, 1934-38. The tobacco grown on the acreage allotted to each farm will become the marketing quota for the farm.

Small increases in domestic consumption

For the fiscal year ended June 1939 tax-paid withdrawals of cigarettes had reached 168 billion, or an increase of 2.2 percent over the fiscal year

Compiled from monthly tobacco warehouse sales reports.

ended June 1938. The 6 months, July-December 1939, show a still further increase of 5.3 percent over the same 6 months in 1938. Production of smoking tobacco during the 4 months July-October in 1939 is 6.4 percent greater than in the same period in 1938.

Consumption of tobacco products as a whole follows the trend of business activity rather closely. Increased industrial production and employment tend to increase consumption of tobacco products. Changing business conditions likewise tend to cause shifts in consumption of the different tobacco products.

If business conditions should remain at the present level or show some improvement, domestic consumption of flue-cured leaf in the manufacture of cigarettes and smoking mixtures might be expected to be slightly above that of the past year.

Export situation uncertain

The European War and general disturbed conditions abroad cause the outlook for exports of flue-cured, the most important export type of the United States, to be uncertain. During the 6 months ended December 1938 the flue-cured exports totaled 256,563,000 pounds whereas for the same 6 months ended December 1939, the exports totaled 140,212,000 pounds. Flue-cured supplies in Europe as a whole at the beginning of the European War were said to be sufficient for about 2 years. In case the war is of short duration, the curtailment of United States exports might be only temporary. If the war should continue until existing foreign supplies of United States flue-cured approach exhaustion, the British no doubt will renew purchases in United States markets, but shortage of dollar exchange and other factors probably will cause them to draw as far as possible on other sources of supply for tobacco. Trade agreements entered into by the British and French with Turkey and Greece provide for increased purchases of Oriental types of tobacco. The greater use of Oriental tobaccos during the war may develop a new taste in tobacco products, which eventually would adversely influence the export demand for United States flue-cured tobacco.

Record supply; large domestic stocks in 1940

The record 1939 flue-cured supply of more than 2 billion pounds was due not only to a 35-percent increase in acreage over the acreage of 1938 but also to the high yield of 905 pounds per acre, the second highest on record. The present supply is more than $2\frac{1}{2}$ times as great as the 1938 disappearance and over 3 times as great as the average 1933-37 disappearance.

Stocks on July 1, 1940 may be as much as 450 million pounds greater than on July 1, 1939. A part of this increase will consist of tobacco purchased for British account, the options on which may or may not be exercised. In view of this there can be no assurance that the 1940 marketing quota of about 660 million pounds will be sufficient to bring supply in line with normal disappearance. If the present restrictions on British imports are modified, and English companies exercise their options and at the same time purchase normally

of the 1940 crop, the 1940 marketing quota will probably be effective. On the other hand, if the British do not exercise their options and either remain out of the 1940 market or materially reduce their purchases, the 660 million-pound quota will be too large.

BURLEY, TYPE 31

The Lexington market opened December 11 and most of the other markets on December 12. Sales of more than 3 million pounds on the opening day broke all records for one-day sales. The average price on the opening day was 17.6 cents. The fact that the opening of the markets had been postponed from December 4 to December 11 was partly responsible for the capacity sales which took place on the Lexington market and also on the other markets which opened the following day. Sales were started at 8 o'clock instead of 9, the usual time, and the markets were open on Saturday, December 16. All markets were closed for the holidays after sales were completed on December 22 and did not reopen until January 8.

Sales have been heavy; prices lower than in 1938;
rejections few.

From December 11 to January 19, approximately 280 million pounds of Burley were sold for producers at an average price of about 16.9 cents. The December sales averaged around 16 cents, whereas for the week ending January 19, the average was 18.7 cents. The continued strength of prices in the latter part of the season suggests that the season average price may be about 17.5 cents, compared with the season average farm price of 19 cents for the 1938 crop.

Post-holiday offerings contained a larger proportion of lugs and flyings and a smaller proportion of leaf and tips than the pre-holiday offerings. The general quality of all offerings during January was considered better than the offerings during December.

It is expected that some of the Burley markets will close the last of January, but due to cold weather, many of them may remain open until near the middle of February.

Growers vote for acreage control in 1940

The 1939 supply of 1,045 million pounds of Burley was above the reserve supply level as set forth in the Agricultural Adjustment Act of 1938. A marketing quota was proclaimed by the Secretary October 28 and the referendum was voted on favorably November 21. Of the 118,527 votes cast 83.3 percent was favorable to acreage control in 1940.

The conversion of the marketing quota approximating 290 million pounds to an acreage basis resulted in an acreage allotment of 339,466 acres to which an approximate 25,000 acres will be added to increase small farm allotments, making the total about 365,000 acres. Compared with the 416,300 acres grown in 1939, this is a reduction of 12 percent.

Domestic demand unchanged

It has been estimated that during recent years approximately two-thirds of the Burley crop has been used in the manufacture of cigarettes. Consumption of cigarettes continues to increase but at a slower rate. On the other hand, this increased use of Burley in cigarettes is offset to some extent by the continued decrease in chewing tobacco.

Exports of Burley represent a minor part of the crop. Burley never has been an important export type, the average exports being between 10 and 11 million pounds annually.

2/ Season through January 18, 1940.

MARYLAND, TYPE 32

The Baltimore and auction-floor sales of the 1938 crop sold for producers during the 1939 calendar year amounted to 26,079,000 pounds, or 89 percent of the crop of 29,250,000 pounds. The average price received for this portion of the crop was 19.4 cents. Month to month prices were somewhat below those of the previous year but during the closing months of the year prices were stronger than in 1938.

About 25 percent of the 1938 crop, or 7,141,000 pounds, was sold over auction floors at Hughesville and Upper Marlboro. These auction floors, - an innovation in marketing Maryland tobacco, - opened on May 1 at Hughesville and on May 2 at Marlboro, closing for the season September 14. Auction-floor sales this season were principally of the lower grades of tobacco. One additional warehouse has been built at Hughesville, and trade sources indicate that other floors will be opened during the coming selling season.

The 1939 crop estimated December 1 at 29,796,000 pounds which will be sold during the calendar year 1940 is only 2 percent greater than the 1938 crop. Domestic utilization of Maryland tobacco may be increased slightly in view of a possible further increase in cigarette consumption.

Exports of Maryland tobacco which have been declining for several years reached 6,332,123 pounds in the calendar year 1939, an increase of 40.4 percent over the exports in 1938. However, the present export situation will affect exports of Maryland tobacco adversely, just as it has other export types.

The supply of 69 million pounds indicated December 1 is 3 percent above the supply of 1938. Disappearance on the other hand has not differed greatly over the past 8 years from the 1938 disappearance of 27,600,000 pounds.

FIRE-CURED AND DARK AIR-CURED TOBACCOES,
TYPES 21-24 AND 35-37Fire-cured market openings

The Virginia fire-cured markets for type 21 opened on November 27 and 28. Markets were closed after sales were completed on November 29 because British buyers withdrew from the markets. They reopened, however, December 4 after arrangements had been made by which the Commodity Credit Corporation made funds available for the portion of the crop of fire-cured and dark air-cured tobaccos normally taken by British manufacturers. The plan for these tobaccos is essentially the same as that for flue-cured except that the option to buy extends to October 1, 1941.

The price received for sales of type 21 during November was 10.8 cents compared with 9.9 cents in November of 1938; the December price this year was 10.8 cents compared with 10.1 cents. Sales through January 18 totaled about 11,000,000 pounds, which is more than one-half of the crop of 19,040,000 pounds estimated December 1. The average price to January 18 was about 11 cents. The 1939 crop is of better average quality than the 1938 crop.

Because of the cold weather, which was unfavorable for stripping and handling tobacco, the markets for Kentucky and Tennessee fire-cured, type 23, were late in opening. The Murray market for this type opened January 9; Paducah, January 10; and the Mayfield market, January 16. Opening prices were higher than last year on most of the heavy leaf and lug grades but about the same for thin leaf grades.

The December 1 estimate of production for type 23 is 22,556,000 pounds, which is 3.5 percent greater than the 1938 crop. With prices about the same as those of 1938, which averaged 6.9 cents, the value of the crop is expected to be slightly larger than for the crop of 1938.

Markets for Kentucky and Tennessee fire-cured, type 24, opened December 9 and remained open through December 22, reopening January 2. Sales through January 12 totaled about 110,000 pounds. The December price averaged 6.2 cents whereas the price to January 12 averaged 7.2 cents. Less than 10 percent of the 1939 crop of 1,328,000, estimated as of December 1, has been sold. The crop is 5 percent smaller than the 1938 crop. Markets for Kentucky and Tennessee fire-cured, type 22, will open January 30.

Dark air-cured market openings

One Sucker sales in Kentucky during December, after the opening of the markets on December 9, totaled 5,606,607 pounds, or about 30 percent of the crop as estimated December 1, at an average of 5.4 cents. Total sales through January 19 amounted to 9,524,000 at an average price of 6.5 cents. The season average farm price for the 1938 crop was 5.9 cents. One Sucker markets were closed from December 19 to January 6. After the reopening prices were generally higher. The crop is considered one of the best in recent years.

The Owensboro market for Green River, type 36, opened December 7 and the Henderson market December 8. Sales in Kentucky during December totaled 2,155,629 pounds at an average of 7.0 cents per pound. The volume of sales has been small on account of unfavorable stripping weather. The production estimated December 1 is 15,300,000 pounds, or about 4 percent greater than the 1938 crop; the crop as a whole is considered normal as to quality.

December sales of Virginia sun-cured, type 37, totaled 510,335 pounds at an average of 10.5 cents, compared with 10.9 cents in 1938 and 8.9 cents in 1937. The quantity sold is in line with December sales over the past several years; averaging about 20 percent of the crop, estimated December 1 as 2,520,000 pounds or 15 percent more than the production of 1938.

Supply in relation to disappearance

The supply situation for the dark types of tobacco is more favorable than it has been for several years. Though the 1939 production of both classes of dark tobaccos is greater than the 1938 production, stocks as of October 1, 1939 were smaller than in 1938, and the resulting supplies were lower than in 1938. In the case of fire-cured, the supply is 6.2 percent below 1938 and in the case of dark air-cured, only 0.9 percent less. Disappearance (domestic consumption plus exports) has been decreasing for the past several years and for both classes is only from one-half to one-third of what it was in the early 1920's. The supply of these types is less than the reserve supply level defined in the Agricultural Adjustment Act of 1938 and no marketing quota was proclaimed for the 1940 crops. The supply of dark tobaccos is 327 million pounds and the reserve supply level is 341 million pounds.

The By-Products Diversion Programs, operating under the Division of Marketing and Marketing Agreements since March 1936, were not continued for the 1939 crop of dark tobaccos. However, advances are being made on these types of tobacco by the Commodity Credit Corporation, which is now under the supervision of the Secretary of Agriculture.

Decline in consumption of dark tobacco products; exports adversely affected

Consumption of snuff, which is the principal dark-fired product, declined 2.6 percent during the 6 months beginning July 1939. Snuff consumption has remained relatively stable at around 36 million pounds during the past 3 years.

Manufactures of chewing tobacco declined from 55,660,000 pounds for the year beginning July 1937 to 53,352,000 pounds during the following year. The first 4 months of the year beginning July 1939 show a decrease of 4.8 percent.

Exports of fire-cured tobaccos during the crop year ended October 1939 were 56,515,000 pounds. This was a 3 percent increase over the exports for the year ended October 1938. Exports of dark air-cured types for the same years increased from 3,879,000 to 3,981,000 pounds. Exports of black fat and dark African have decreased.

In view of the continued decrease in consumption of dark tobacco products in many parts of the world, and in view of maintained production of the dark types in many foreign countries, this increase in exports can not be construed to mean that there has been any real improvement in the export demand for dark types. (Tobacco Situation, TS-12, p. 8.)

Since the beginning of the European War, exports of the dark types have been adversely affected by the same factors cited under flue-cured and Maryland.

Fire-cured tobacco: Exports from the United States to principal importing countries, by months, July-December, 1938 and 1939

1/ Norway, Sweden and Denmark. 2/ Exports by countries not available at time of release of this Tobacco Situation. Compiled from official records of the Bureau of Foreign and Domestic Commerce, Department of Commerce.

Cigar Tobaccos, Types 41-62

Production of all three classes of cigar tobaccos - filler, binder, and wrapper - as estimated on December 1 is larger than in 1938. However, smaller stocks than in 1938 bring the supply in each class to a level not greatly different from supplies in 1938. Considering the part of types 51 and 52 damaged or destroyed by hurricane and flood in 1938, the supply shown for 1938 is somewhat larger than the actual supply. The large stocks of type 54, known to be held on farms in October 1939 indicate a disappearance in 1938 somewhat larger than the actual disappearance. Supply of wrapper tobaccos in 1939 were 23 percent larger than in 1938 but fairly well in line with the 5-year average 1933-37. The hurricane and flood destroyed or damaged about 588,000 pounds of the 1938 crop of type 61.

Preliminary indications of prices paid for the portion of the 1939 cigar tobacco crop sold to January 1, 1940 are for prices somewhat better than for the 1938 crop. The larger part of the 1939 crop of type 55 has been purchased by manufacturers and dealers at prices considerably above those paid for the 1938 crop. The 1939 crop of type 55 is considered one of the best in the past several years.

Tax-paid withdrawals of large cigars indicate a moderate but consistent increase in consumption of cigars over the past 18 months. The rate of increase has been accelerated somewhat in the 6 months, July-December 1939. Consumption of tobacco products as a whole, and cigars in particular, is increased with increased consumer incomes.

Domestically grown cigar tobacco is practically all consumed in the United States. Exports have been around 1 million pounds for the past 8 years. Exports in 1938-39, however, were 2,961,000 pounds, the highest since 1930-31. Domestically grown cigar leaf in the United States is supplemented by leaf from Cuba, the Philippines, and Puerto Rico, mostly filler, and wrapper leaf from Netherlands Indies. Formerly, the Sumatra wrapper has been shipped to the Netherlands where it has been sold at auction, and United States purchases imported from the Netherlands. The war has upset this usual routine. Sales of grades purchased by American buyers will be made either in Sumatra, or in the Netherlands on the basis of samples sent there. In either case the usual imports of Sumatra leaf will be received in the United States, directly from the Netherlands Indies. The imports of Sumatra leaf during the 5 years 1934-38 averaged about 1,900,000 pounds.
